

## INDICE DE MATERIA

## Vol 6, No. 1 2006

|                                 |        |
|---------------------------------|--------|
| Citoquininas                    | 3      |
| coeficiente de multiplicación   | 23     |
| cultivo de tejidos              | 15     |
| cultivo <i>in vitro</i>         | 35     |
| diferenciación genética         | 9      |
| electroforesis desnaturalizante | 59     |
| elicitor                        | 29     |
| embriogénesis somática          | 51     |
| formación de callos             | 35     |
| fototoxicidad                   | 29     |
| Henequén                        | 3      |
| Hiperhidricidad                 | 3      |
| <i>Manihot</i>                  | 9      |
| Marcadores                      | 9      |
| medios de cultivo               | 35     |
| mejoramiento genético           | 41, 45 |
| micropropagación                | 23, 35 |
| organogénesis                   | 3, 15  |
| paclobutrazol                   | 23     |
| plantas <i>in vitro</i>         | 29, 51 |
| Polimorfismo                    | 9      |
| precipitación salina            | 59     |
| purificación de proteínas       | 59     |
| reguladores de crecimiento      | 35     |
| relaciones filogenéticas        | 9      |
| <i>Saccharum</i> spp. Híbrido   | 51     |
| selección                       | 45     |
| <i>Solanum cha coense</i>       | 45     |
| <i>Solanum tuberosum</i> L.     | 41, 45 |
| thidiazuron                     | 15     |
| tubérculos                      | 41     |

## MATERIA INDEX

|                              |        |
|------------------------------|--------|
| breeding                     | 45     |
| callus formation             | 35     |
| culture medium               | 35     |
| Cytokinin                    | 3      |
| denatured electrophoresis    | 59     |
| elicitor                     | 29     |
| genetic differentiation      | 9      |
| growth regulators            | 35     |
| Henequen                     | 3      |
| Hyperhydricity               | 3      |
| <i>in vitro</i> culture      | 35     |
| <i>in vitro</i> plant        | 29, 51 |
| <i>Manihot</i>               | 9      |
| Markers                      | 9      |
| micropropagation             | 23, 35 |
| multiplication coefficient   | 23     |
| organogenesis                | 3, 15  |
| paclobutrazol                | 23     |
| phylogenetic relationship    | 9      |
| phytotoxicity                | 29     |
| plant breeding               | 41     |
| Polymorphism                 | 9      |
| protein purification         | 59     |
| <i>Saccharum</i> spp. Hybrid | 51     |
| salt precipitation           | 59     |
| screening                    | 45     |
| <i>Solanum cha coense</i>    | 45     |
| <i>Solanum tuberosum</i>     | 45     |
| <i>Solanum tuberosum</i> L.  | 41     |
| somatic embryogenesis        | 51     |
| thidiazuron                  | 15     |
| tissue culture               | 15     |
| tubers                       | 41     |
